EDUCATION

University of Illinois at Urbana-Champaign
present(expected 2028)

September 2024-

Bachelor of Science in Statistics

GPA: 3.78/4.00

Related Coursework:

Computer Science Data Science Discovery Discrete Structures Calculus

TECHNICAL SKILLS

Coding : C++, python, java, R programming

Spoken Languages: Mandarin (native), English (fluent), Japanese (basic proficiency)

WORK EXPERIENCE

Deloitte Consulting

Beijing, China

Business Analyst Intern

August 2023-October 2023

- Provided data-driven consulting for an Indian construction material platform serving 1,000+ clients; optimized its web portal by analyzing 12 manufacturers' quotation data and benchmarking with 8 competitors.
- Conducted comprehensive risk analysis for a U.S. real estate brokerage, identifying key risks in lease structure, tenancy behavior, and operational bottlenecks across 50+ client profiles.
- Built dynamic cash flow and macroeconomic forecast models using ARIMA, predicting U.S. GDP growth and inflation trends over 9- and 18-month horizons with >85% validation accuracy; evaluated model risk and presented findings to senior consultants.

Chongqing Huayi Investment Management

Chongqing, China

Investment Analyst Intern

March 2023- June 2023

- Collected and analyzed financial statements of 30+ listed companies; built DCF and relative valuation models, identifying undervalued assets with >12% return potential.
- Developed predictive models for China's A-share market using time series analysis and random forest classifiers, achieving 78% F1-score on test datasets.
- Monitored portfolio performance worth ¥10M+ weekly; conducted Sharpe ratio analysis, risk assessments, and prepared investor-facing reports to support strategic decision-making.

PROJECT HIGHLIGHTS

U.S. Salary Trends Analysis and Forecasting

November 2024 - December 2024

- Analyzed U.S. salary trends over the past five years using statistical and machine learning models to identify key patterns.
- Developed predictive models to forecast future salary trends, providing insights into potential wage growth and industry shifts.
- Conducted factor analysis to identify key economic and demographic variables influencing income across sectors.
- Collected and processed large-scale salary datasets, applying data visualization techniques to present findings effectively.
- Collaborated with a team to refine model accuracy, validate predictions, and ensure practical applicability for workforce planning.

EXTRACURRICULAR ACTIVITIES & LEADERSHIP

International Elite Mentorship Program, Participant

Summer 2023

- Selected to participate in a mentorship program led by Professor Haiyuan Wang from Columbia University on the topic "Applied Data Science: Hands-on Machine Learning with Python and Applications in Finance"
- Gained practical experience in Python programming, data visualization, statistical analysis and modeling, task automation, and financial modeling
- Built machine learning, data science, and AI algorithms applied to financial scenarios
- Collaborated on a group project to develop a statistical model using Python to forecast stock performance based on historical data
- Authored and published a research paper titled "Application of AI in Finance"

Trainee, Chongqing University Leadership Training Program

January 2022-February 2022

- Attended leadership lectures, discussed leadership topics with fellow participants from around China
- Prepared presentations on case studies on leadership and management issues, e.g., communication breakdown
